

# From \Design to {Code}: Empowering Teams to Build Better Software Faster.

Workbench boosts software delivery with AI-guided system design and design-aware code generation, leveraging business design insights to automate developer tasks.

Tangible <benefits/> for your business

30%

Increase in developer productivity

50%

Reduction in time-to-market

100%

Open and Future proof

A <productivity suite/> for modern development teams

Securely transform ideas into robust **system** and **implementation design**

- ✓ Efficiently capture and track business capabilities across their lifecycle
- ✓ Securely design & refine system architecture
- ✓ Collaboratively transform functional requirements into implementation design
- ✓ Align everyone on a single source of truth

Empower developers to **focus on high-impact work**

- ✓ Auto-generate code from implementation designs
- ✓ Automate repetitive coding and configuration activities
- ✓ Streamline routine maintenance and updates
- ✓ Standardize implementation patterns, reduce errors and improve consistency across projects.

Don't re-invent the wheel and **re-use best practices**

- ✓ "Codify" and share patterns and best practices across teams and enforce guidelines
- ✓ Leverage solution templates for components and integrations
